## Review & Progress

From Requirements Analysis to Design

# From the Requirements Analysis

**Based on the previous analysis, we identified:**

## Basic Users

- Students seeking Erasmus opportunities or postgraduate studies
- Students in need of career guidance
- Users requiring 24/7 guidance and support

## Core Features

- Search and compare academic programs
- Chat with an AI Mentor
- Read and publish reviews
- Save notes and schedule meetings
- Communicate with other users

## Usage Context

- Android mobile application
- Short sessions for everyday use
- On-the-go interaction with voice input

## Design Stage Objectives

- Transform user needs into interaction structures
- Translate functional requirements into user interface elements

# 2

## Personas

Main user Categories of Decyra

# Persona 1 – The Erasmus Explorer

## Bachelors student 2nd-4th year,

### Goals

- Find the Erasmus program that best matches their budget and preferred destination.
- Receive 24/7 support without having to wait for responses from Erasmus coordinators.

### Pain Points

- Information is scattered across multiple sources.
- Advisors have limited office hours.
- Comparing programs side by side is difficult.

### Key Features Used

Erasmus AI Chat, κριτικές forum, συνομιλία χρηστών, σημειώσεις

# Persona 2 – The Masters Explorer

## Τελειόφοιτος Προπτυχιακός Φοιτητής

### Goals

- Find a postgraduate program that aligns with their academic background and personal interests.
- Understand admission requirements and compare universities side by side.

### Pain Points

- Too many options and scattered information with little guidance.
- No open community forum for discussions and direct communication with other students.

### Key Features Used

- Master AI Chat
- Forum reviews
- User-to-user messaging
- Notes

# Persona 3 – Career Explorer / Academic Advisor

## Computer Science graduate / Academic advisor

### Goals

Explore potential career paths and professional opportunities.

### Pain Points

- Uncertainty about which career path to pursue.
- Lack of personalized career guidance.

### Key Features Used

- Career AI Chat
- Community Forum
- User-to-user messaging
- Notes
- Video conferencing

### Behavior

- Browses and contributes to discussions in the community forum.
- Uses the AI chat to receive personalized career guidance.
- Supports younger students by sharing advice on Erasmus and postgraduate programs.
- Can become an academic advisor through the application.

## Low Fidelity Prototypes

Basic structure & wireframes

# Physical Design Choices

## Color Palette

- **White #FCFCFC**  
App Background
- **Primary Navy #0F1F3D**  
Used for headings and structural elements
- **Orchid #FFE4FF**  
Used for action buttons, AI highlights, animations, and logos
- **SoftPinkGlow #DA70D6**  
Background for LLM/personal messages and light UI accents

## Typography & Icons

- **Roboto (Android native)**  
H1: 24sp Bold · Body: 14sp · Caption: 12sp
- **Material Icons**  
Simple outlined style, aligned with academic content

## Layout & Οργάνωση Χώρου

- **Vertical layout**  
Supports natural scrolling and one-handed use
- **Material Design 3**  
16dp margins, 8dp grid, card-based lists
- **Bottom Navigation Bar**  
Quick access to main sections

## Sound & Notifications

- **Notifications**  
Firebase Cloud Messaging + Supabase Edge Functions
- **System-level alerts**  
For critical updates requiring user attention

# Layout Options

## Overall Layout Structure

- Single-column layout
- All elements arranged in a vertical sequence.
- Easy to understand and navigate.

## Layout Characteristics

- Natural vertical scrolling (scroll down)
- Ideal for one-handed use
- Suitable for quick actions
- Task-Based UI

# Low to High Fidelity Prototypes

# Input & Control Options

## Input Methods

- **Touch / Tap**  
Primary input. Buttons  $\geq 44\text{dp}$ . Swipe & scroll for navigation.
